## RESEARCH REPORTS

Sustainable Aquaculture for a Secure Future

---

**Title:** Detritus-Based Aquaculture Systems

**Author(s):** Raul H. Piedrahita  
Department of Agricultural Engineering  
University of California  
Davis, California, USA

**Date:** 28 February 2006

Publication Number: CRSP Research Report 90-A2

The CRSP will not be distributing this publication. Copies may be obtained by writing to the authors.

**Abstract:** The general characteristics of detritus-based aquaculture systems are reviewed, where detritus is defined as particulate and dissolved organic matter. Basic criteria of water quality, nutrient cycles, fish stocking, and pond management practices are described. Public health considerations are important questions in the use of detritus in aquaculture, and some relevant management and risk estimation issues are discussed here.

This abstract is excerpted from the original paper, which was in *Food Reviews International*, 6(3): 317-331.
